

AI Disclosure Form

1. Confirmation of Draft Creation by AI

I confirm that the following components of the seminar project were initially drafted, structured, or suggested by Artificial Intelligence (AI) tools:

- **AI Tools Used:** Gemini (Antigravity).
 - **Parts Drafted by AI:**
 - **Presentation Slide Outline (`outline_slides.md`):** Drafted the slide-by-slide structure (16 slides) based on the content of `User_Guide.md` under the constraints of a 15-minute presentation time limit.
 - **API Contract Testing User Guide (`User_Guide.md`):** Drafted the initial documentation for Section 4b: API Contract Testing, including 9 endpoint schemas, Pact vs. Postman comparison tables, and instructions.
 - **Presentation Slide Deck (`Slide.pptx`):** Generated the text contents for the slides in English and wrote a `python-pptx` script to automate copying and merging text blocks onto the styled slides from `PresentationSlide.pptx`.
 - **Interactive Slide Page (`Slide.html`):** Converted `Slide.pptx` slide definitions into an interactive HTML slide presentation page with keyboard controls.
-

2. Details of Review and Modifications

I have audited, verified, and modified the content generated by AI to ensure correctness, technical accuracy, and visual standards for presentation:

- **User Guide Enhancements (`User_Guide.md`):**
 - Manually reviewed and cleaned up the document's verbosity by removing 5 minor schemas (Product details, Cart GET/POST, Checkout, Orders) to keep the guide concise and focused on high-value endpoints (Auth, Products, Apply Coupon, and Errors).
 - Integrated a Quick Start navigation note linking directly to Section 5.1a (Test Scripts) to help beginners get started quickly without redundant theory.
 - Verified and synchronized 100% of the properties between schema declarations and Postman script assertions.
 - **Interactive Slide Layout & Content Restoration (`Slide.html`):**
 - Repaired layout formatting bugs on Slide 2 and slide header styles.
 - Fixed CSS styles on Slide 6 by adding the missing `.card-amber` class to correctly style the top border of the PUT request card.
 - Restored full, detailed text, tables, and scripts for slides 8, 9, 10, 14, 15, and 16, replacing the over-summarized/truncated text that the AI had generated (e.g., restoring original Postman Javascript assertions, Pact comparison tables, and SUT verification flows).
 - Redesigned the card alignment inside the presentation window, using flex-grow and vertical centering (`.slide-content`).
-

3. Components Completed Entirely by Humans

I guarantee that the following parts of the project were completed 100% through my own intellectual efforts and execution, without any AI intervention:

- **Postman Collection Restructuring:** Handled collection cleaning and folder organization. Built a custom Node.js script to extract contract tests and isolate them into a dedicated **Contract Testing** folder in both the successful and negative Postman collections, ensuring zero clutter in the core functional requests.
 - **EShop SUT Testing and Defect Discovery:** Successfully ran the EShop SUT locally, executed Postman collection runner checks, and identified two critical defects in the SUT's API contract:
 - **GET /api/products/999** returning **200 OK** instead of **404 Not Found**.
 - **POST /api/cart** with product ID **-1** returning **200 OK** instead of **400 Bad Request**.
 - **Slide Master Template Design:** Selected, configured, and customized the theme style, fonts, background cream colors, and asset sizes for the Slidesgo template (**PresentationSlide.pptx**).
-

4. Commitments and Declarations

I assume full responsibility before the Faculty and University Discipline Committee regarding the truthfulness, accuracy, and transparency of the information declared in this form.

- **Student Name:** Nguyen Hieu Thuan
- **Student ID:** 23127125
- **Completion Date:** 20/07/2026
