

AI Disclosure Form

1. Confirmation of Draft Creation by AI

I confirm that the following parts of the seminar project were first drafted, structured, or suggested by AI tools:

- **AI Tools Used:** Gemini (Antigravity).
 - **Parts Drafted by AI:**
 - **User Guide — Section 1 (Introduction):** Drafted the opening text covering what API testing is, why Postman and Postbot were chosen, the tool survey context, and the guide's scope.
 - **User Guide — Section 4 (API Authentication Testing Patterns):** Rewrote my three pre-recorded video walkthroughs into written step-by-step instructions with screenshot placeholders, and reworded the token auto-save part so it reads as a workflow technique rather than a scripting lesson.
 - **User Guide — Section 8 (References):** Compiled the reference tables (official docs, tools, contract testing standards) with each link checked against the live URL.
 - **AI Audit Report ([Hoang_AI_Audit_Report.md](#)):** Reconstructed the prompt/output log from my working sessions.
-

2. Details of Review and Modifications (Human-in-the-Loop)

I reviewed, corrected, and adjusted the AI output before anything went into the final deliverables:

- **Section 4 verified against the live SUT:** I had the AI read the actual EShop SUT source code and cross-check the section against it. This surfaced real mistakes (a non-existent endpoint, a wrong login field, and an incorrect expected status code), which I confirmed and corrected. I also chose to keep the shared team credentials (test@eshop.com) for consistency across the guide instead of switching to the SUT's default users, and flagged that the demo data needs a matching user added.
 - **Member sections checked before compilation:** I read through the sections written by Quang, Huy, Phương, and Thuận.
-

3. Components Completed Entirely by Humans

The following parts were done through my own judgment and effort, without AI generating the content:

- **Team lead and coordination:** Splitting the work across five members, setting the timeline, running check-ins, and deciding which tool and scope the project would follow.
 - **Reviewing the presentation:** Watching Thuận's slide deck and HTML preview against his outline and giving concrete feedback.
 - **Final decisions on content:** Choosing what to keep, cut, or reword in the User Guide, and approving each section before it went into the compiled file.
-

4. Commitments and Declarations

I take full responsibility before the Faculty and University Discipline Committee for the truthfulness, accuracy, and transparency of what I have declared in this form.

- **Student Name:** Lưu Huy Hoàng
- **Student ID:** 23127047
- **Completion Date:** 21/07/2026
