

# AI Disclosure Form

---

## 1. Confirmation of Draft Creation by AI

I confirm that the following components of the seminar project were initially drafted, structured, or suggested by Artificial Intelligence (AI) tools:

- **AI Tools Used:** Claude Sonnet 4.6, Claude Opus 4.6, Gemini 3.5 Flash.
  - **Parts Drafted by AI:**
    - **Backend Demo Source Code (EShop Demo API):** Initially generated by Claude Sonnet 4.6; the server scaffold, route handlers, and middleware were AI-produced.
    - **User Guide (User\_Guide.md) — Sections 2, 5.2, and 7:** Initially generated and revised by Gemini 3.5 Flash and Claude Opus 4.6; AI drafted the prose for Setup Environment, Collection Runner & Data-Driven Testing, and the 6 Troubleshooting entries (Symptom → Cause → Solution format).
    - **Postman Request Configuration (GET /api/products/:id):** Guided by Gemini 3.5 Flash on setting up the GET a product request using Path Variables in Postman.
    - **Postman Configuration Debugging:** Login body format and JSON syntax errors were diagnosed with assistance from Claude Sonnet 4.6 and Gemini 3.5 Flash.
    - **Code Review Fixes (api\_specification.yaml, environment naming, request ordering, discount value):** Applied by Claude Sonnet 4.6.
- 

## 2. Details of Review and Modifications (Human-in-the-Loop)

I have audited, verified, and modified the content generated by AI to ensure correctness, technical accuracy, and alignment with project requirements:

- **Backend Demo Source Code (EShop Demo API):**
  - Reviewed the generated output, verified the server ran correctly, and kept it as-is for the initial scaffold.
- **User Guide Enhancements (User\_Guide.md):**
  - **Section 2 (Setup Environment):** Directed the AI to generalize the wording; personally added the *Create Collection* step and the *Import via Ctrl+O* instruction through specific prompts.
  - **Section 5.2 (Collection Runner & Data-Driven Testing):** Provided screenshots of the Postman Dataset UI and dictated the exact steps for *Option 2: Dataset & Data Views*; verified AI-drafted prose against the live Postman interface.
  - **Section 7 (Troubleshooting):** Personally outlined the 6 troubleshooting topics (ECONNREFUSED, undefined `{{auth_token}}`, Postbot issues, Newman path errors, assertion debugging, HTML report generation); accepted AI-expanded entries after review.
- **Postman Request Configuration (GET /api/products/:id):**
  - Applied Option 2 (Path Variable `:id`) as suggested by AI, instead of Option 1 (hardcoded URL), for more flexible request management in the collection.
- **Postman Configuration Debugging:**
  - Identified and removed an unnecessary `express.urlencoded()` fix the AI suggested; manually corrected the Postman request body format.

- **Code Review Fixes:**

- Verified AI-applied changes against **code-review.md** and ran the server to confirm correctness.
- 

### 3. Components Completed Entirely by Humans

I guarantee that the following parts of the project were completed 100% through my own intellectual efforts and execution, without any AI intervention:

- **Postman Collection & Environment JSON Files:** Designed and written entirely by me, including folder structure, request definitions, and environment variables.
  - **Image Assets:** All screenshots and visual assets used in the User Guide were captured and prepared by me.
  - **Outline Structure:** The overall outline and section organization of my contributions were planned and structured entirely by me without AI assistance.
- 

### 4. Commitments and Declarations

I assume full responsibility before the Faculty and University Discipline Committee regarding the truthfulness, accuracy, and transparency of the information declared in this form.

- **Student Name:** Nguyen Minh Quang
- **Student ID:** 23127462
- **Completion Date:** 22/07/2026
